☒ 2. Further Assessment Needed Under CERCLA:

Low priority for further assessment

Discussion/Rationale:

Block 35 methylene chloride plume is an undefined plume with undefined sources. Sample results for chlorinated solvents submitted in 2000 from an on-site monitoring well revealed a methylene chloride concentration of 78.6 ug/L. Due to the close proximity of nearby municipal wells, further groundwater investigation is warranted to determine extent of contamination, potential sources and pathways.
